

YOUR QUICK START GUIDE

The Lead Machine

A little system that finds the warm people already in your world and writes each one a personal message. You approve, you send. Ten minutes a day.

What it does, in 3 simple steps

- 1 It finds people.** It looks through the people you already know (your LinkedIn contacts, people who commented on your posts) and picks the ones who need what you sell.
- 2 It cleans the list.** It takes out your clients, your family, your friends, and anyone you already messaged. Only the right people are left.
- 3 It writes the messages.** It writes one short, friendly message for each person, in your own words, and shows you the list.

THE ONE THING IT DOES NOT DO

It does **not** send the messages for you. After it finds the people and writes the messages, **you** read them, pick the ones you like, and send them yourself. That is on purpose, so your accounts stay safe and the messages still feel like you. 🙌

WORKS IN ANY AI: CHATGPT, CLAUDE, GROK, GEMINI

Start in 3 steps

- 1**
Download the folder from the email and unzip it. 📁
- 2**
Open the file **BROWSER-VERSION.txt** and copy the prompt inside it.
- 3**
Open your AI, start a new chat, paste it, hit send. 🚀

It asks you a few simple questions about your business. Answer them once, and you are ready to go. Keep using that same chat every day.

Give it your people

The best fuel is your LinkedIn connections list. Get it here: **LinkedIn, Settings, Data privacy, Get a copy of your data, pick Connections, Download**. LinkedIn emails you a file. When the chat asks you to hunt, paste that file in. No file? Just paste any list of names, or the people who commented on your posts.

The 4 things you say to it

set me up

Tells it about your business, what you sell and how you talk. You only do this once.

hunt 10

It reads your people and finds 10 who show they need you, with proof in their own words.

screen

It removes clients, family, friends, and anyone you have already messaged. 🚫

draft

It writes one short message for each person and shows you a numbered list. You reply with the numbers you like.

Two ways to run it

Both work. Pick whichever suits you.

Way 1 Do it by hand

Copy your connections or comments and paste them into the chat yourself. When it writes the messages, copy each one and paste it into LinkedIn or WhatsApp yourself. Works in any AI. A little more clicking, but nothing to install. 📋

Way 2 Let it read for you

Install the **Claude for Chrome** extension and stay logged in to your accounts in Chrome. Then Claude reads your messages and connections straight from the browser, so you skip the copy-paste. Chrome works best, and your accounts must be logged in or it will not work. ⚡

THE ONE RULE

Either way, you read and approve every message, and you send it yourself. That keeps your accounts safe, and it keeps you the human in the conversation. 🤝

From **Joe Che** · Masterminds HQ · Use it 10 minutes a day and keep your pipeline full.
